

### Technology Managed Services

VARtek's Managed Services model is a holistic full-service solution that fulfills your technology needs by driving IT Leadership, building a solid and reliable infrastructure and integrating technology in the curriculum and classroom. VARtek's TLC (Technology Learning Core) is a strategic implementation of your district's vision for technology.

#### The Benefits Result In

- Predictable Costs
- Performance
- Reliability
- Accountability

In addition to our TLC Solution we offer the following options in customized packages or as stand-alone offerings:

#### IT & Technology Integration Audits

- Consultative services that leverage our unique 25 years of K-12 specific, multiple state perspective
- Wireless Analysis/Heat Maps
- Security Auditing and Penetration Testing

#### Staff Augmentation

- Desktop Technical Resources
- Network Administration
- Systems Administration
- Classroom Technology Coach (CTC's)
- Dual Role Positions (Integration & Technical)
- Technology Leadership

#### Shared Services Package

- Services that you need, when you need them.
- Project Management
- Training & Professional Development
- Strategic Planning
- Engineering

#### Service Desk

- Remote support for end user devices
- Provide online and live chat support to the district's end users at a fraction of the cost of on-ground support

#### Server & Infrastructure Monitoring & Management

- 24/7 remote monitoring of connectivity
- Perform preventative maintenance
- Notification of service issues discovered through monitoring
- Monitor supported firewalls, routers, and managed switches
- Password resets

#### Asset Planning & Inventory Management

- Inventory of computer hardware and software
- Managing effective asset refresh strategy aligned with district budget

#### Home Access Support

- Provide more access to more users – students, teachers, administrators, school board members
- Increase access from any location
- Increase access with any device

#### Backup Solution & Disaster Recovery

- Cloud or Storage Area Network (S.A.N.) options available
- Monitor and support automated backup of data
- Routine Disaster Recovery tests to ensure data integrity

#### Communications & Accountability Reporting

- Monthly Principal Reports
- Quarterly Status Reports & Meeting with Superintendent
- Weekly Technology Updates

#### Procurement

- Hardware and software purchasing resource

#### Warranty

- Repair or replacement of end user devices and peripherals

# Technology Talking Points

As a K-12 district administrator, it is important to communicate a clear vision for the future of technology — to teachers, parents, students, staff, and the media. This guide is designed to help you fill in the progression of tactics and milestones to achieve the end goal.

## Our Technology Vision:

*“We are preparing students to be college- and career-ready in a next-generation learning environment.”*

**We are supporting this vision by investing in these 5 pillars of a progressive technology environment:**

### **Qualified Technology Staffing**

We are committed to having the right people on the bus. Our district invests in quality personnel to support a first-class technology environment.

### **Reliable Technology Infrastructure**

A reliable technology infrastructure is essential for communications and safety and for teachers to access shared learning resources.

### **Equitable Access to Technology**

Equitable access to devices and connectivity across the district ensures that technology gives every teacher and student the same advantage.

### **Teacher Professional Development**

Teachers who are properly trained to use next-generation learning tools can leverage technology to modify and redefine the learning experience.

### **Student Engagement & Achievement**

When students are engaged, they take learning into their own hands. Students who are engaged are students who achieve, inside and outside the classroom.
